

## The Accelerator™

When you need help in a hurry with no delays you need an *Accelerator™*, the perfect mate to your commercial security system. We've got it!!

Designed, manufactured and serviced in the USA!

### Accelerator™ Price Guide

- Basic *Accelerator* for connection to existing alarm systems. Can be used with most analog VHF or UHF radios. VHF Model ACC-V1. UHF ACC-U1 - \$1,349
- Optional direct call button(s) for use if primary alarm or AC power fails Model ACC-CB ( Price each) - \$98
- Personal alarm radio(s) for use if all Systems (primary alarm, AC power and Accelerator fail or are disabled VHF Model CS101A, UHF CS100A - \$189

### The natural companion.....

to your commercial alarm system is the incredible new *Accelerator™* by Falcon Wireless. The *Accelerator* connects to your existing alarm system to reduce response time from an average of ten minutes or more to TWO minutes or less!

### How it works.....

The *Accelerator* adds instant radio reporting to your commercial alarm system. You have a one time cost for the device. A small installation fee may be applicable, depending on your security system contractor. There are no monthly fees. Where agreements have been, or can be, established with local law enforcement agencies, alarm activations are sent directly to police; supplementing alarm monitoring services and dispatch centers. In rural areas, calls can be sent to local area first responders which might include the local volunteer fire department or citizen response groups (church deacons, nearby merchants, offices, stores, etc.). We have a solution that is just right for YOU!

### ***Accelerator™ is expandable to meet your needs!***

*Accelerator* gets help quicker through faster notification. Typically radios worn by first responders receive a voice message indicating the need for help and the location of the caller within 10 seconds or less. In addition to transmitting a radio message, the Accelerator, when connected to the Internet, can send a text alert message to cell phones worn by law enforcement, citizen responders, and/or premise management. Accelerator is compatible with most commercial alarm systems including ADT, Diebold, etc. All we need is a 2-wire connection provided by the alarm system provider.

# The Accelerator™

## **Accelerator™ makes your security system better!**

There are many good reasons for installing a commercial grade security system provided by certified installers and monitored by an approved monitoring service. There is an equally good reason to add *Accelerator* to improve responder response whether by municipal agencies or volunteer responders. Phil Rich, CTO – Falcon Wireless

We can show you how to set up working relationships with municipal police and fire & rescue services as well as utilizing the resources of volunteer fire departments, merchant associations or church deacons to drastically reduce response time when help is needed. A single one time investment of just \$1,349 provides both direct notification to first responder VHF or UHF 2-way radios as well as to cell phones. You can use to emergency call buttons and intrusion sensors provided by your security company as well as our for emergency backup.

You can equip responders in rural areas with personal 2-way radios to monitor alarm calls and coordinate activities. Models are available for as little as \$129 each with your choice of VHF or UHF. These dandy little radios weigh in at less than six ounces and comes with a neck lanyard and desk charger. Typically messages can be received at distances of up to one mile away from the *Accelerator*.

If you are working with the local Police Department or volunteer fire department, there is no need to purchase 2-way radios. However, if you are sending alert calls to the local volunteer fire department, merchant group, or church members; you will need a few radios to be used for reception of calls transmitted by the *Accelerator*. Or, you can send text messages through an Internet connection to designated cell phones and/or PC's in addition to radio notification.

As a final note, if you don't have a commercial alarm system, we've got some good news for you. We have a completely self contained emergency notification system complete with wireless call buttons, door sensors, motion, and movement sensors that can provide the same high speed capability as the *Accelerator*. The difference in our system and commercial alarm systems is that it is faster and there are no long term contract commitments or monthly charges. Give us a call at 800.489.2611 for more information. You'll be glad you did!
