## AlarmAlert<sup>®</sup>

**Helping those needing help to get it in a hurry!**

Our business is simple. We provide the link between people who need help and those who can provide it as quickly as possible. To accomplish this objective, we developed a new product way back in 2005, shortly after the Federal Courthouse shootings in Atlanta, GA.

The original "product" was a device that linked wireless call buttons through an electronic bridge to broadcast a message over the Evergreen, Alabama police department radios. That product, currently known as an [AlarmAlert](#) is now being used all over the USA to get help in a hurry when need.

Today, *AlarmAlert* is being used in banks, churches, community centers, courthouses, libraries, municipal offices, and schools, all over the USA! Calls can be sent staff and/or security teams on the premises as well as directly to participating law enforcement agencies. See [info4u.us/CareNet.pdf](http://info4u.us/CareNet.pdf) for additional information.

The system consists of a terminal (lower left) and a choice of either a fixed call button (lower left) or personal call button (lower right). A repeater is optionally available (not shown) which may be required in very large buildings. A connection to the Internet is required to allow the terminal to send text messages to cell phones, email with or without an attached audio file to PC's and/or smartphones.

Each button has a unique digital ID corresponding to an associated location (Classroom 101, front office, etc.). The call buttons are \$99 each. The terminal is \$2,495 with one repeater. Additional repeaters are \$495 each. If no repeater is required, the terminal price is \$1,995. All products are covered by a three-year warranty including batteries. A demonstration on your premises can be arranged at no cost of obligation. Just give us all at 205.854.2611 or email [ServinU@falconwireless.net](mailto:ServinU@falconwireless.net).
