

AlarmAlert™

AlarmAlert is the key to improved safety in your Church. Business, Municipal Office or School to get help in a hurry when needed!

Designed, manufactured and serviced in the USA!

What would you do if this guy showed up at your church, school, or office?

If you had an AlarmAlert, he could be taken away in handcuffs in as little as two minutes!

Bad guys don't make appointments!

Bad guys come when least expected, and they can show up anywhere. The most effective defense is early detection and fast response. Unfortunately, commercial alarm systems, and even direct reporting to 911, are way too slow. You must have a way to instantly alert on scene security and local law enforcement directly – not by a box on the wall or desk, but a wireless personal call button that can get help in a hurry when needed.

The SafeCity Program.....

All over the USA, cities and citizens are getting together to make communities as small as Seminary, MS better places to live, work, and play. It's all made possible by a device called AlarmAlert. That's it over on the lower left side. Getting help in a hurry is as simple as pushing a button on an emergency calling device (shown above the AlarmAlert). Within 10 seconds, emergency messages can be broadcast directly to 2-way radios and/or by text/email messages to any cell phone. There are no delays with commercial alarm monitoring systems or even 911, AND, there are no monthly charges!

AlarmAlert is up to 36 times faster than commercial alarm systems!

AlarmAlert can get the message out for churches, courthouses, municipal offices, schools, and business owners working together with their local police departments to make their communities safer from assault, burglary, robbery, and vandalism. The average crime is committed and completed within four minutes or less. The average reporting time to law enforcement is around six minutes, with on scene response time being around ten minutes. Clearly, time has been in favor of the bad guys, even with a commercial alarm system and E911 reporting. AlarmAlert puts the advantage in favor of the victim! More info on the reverse side.

AlarmAlert™

We're in the crime fighting business.....

with an emphasis on personal safety. It all started back in 2005 when we developed the first version of *AlarmAlert* (then called the *Companion*) to provide better courthouse safety after the Atlanta federal court house shootings. We've come a long way since then, and we're not through yet! Phil Rich, CTO – Falcon Wireless

The fundamental purpose of *AlarmAlert* is to get help when needed for people in peril, with a secondary emphasis on property and places at high risk of theft and vandalism. When possible, working relationships are established with local law enforcement agencies to provide a direct link without delay. This is easy to do for courtrooms, municipal offices, and schools. For more information on how *AlarmAlert* is used in courtrooms, please visit info4u.us/MattieKnows.

Info4u.us/TimKnows provides a good example of how *AlarmAlert* is used by churches with local law enforcement participation. Optionally, we use a special version of *AlarmAlert* as the hub for a complete COMMUNITY emergency notification system which can be used either with, or without direct connection to law enforcement. Additional information is on a special program developed for the use of community care teams. See info4u.us/Safe-City.pdf for more information.

One of the more exciting applications for *AlarmAlert* is with schools where a single *AlarmAlert* terminal, ranging in cost from \$1,400 to \$2,800 can serve an entire school, even very large ones. The system is expandable with the ability to serve hundreds of offices, classrooms, and activity areas. The cost for providing a personal emergency wireless call button is just \$100 PER CLASSROOM! The DeArmanville school system in Oxford, Alabama has every office, classroom, and activity area equipped with *AlarmAlert* emergency call buttons. See info4u.us/DeArmanville-Story.pdf for more information.

The bottom line is that *AlarmAlert* can make the places where we live, work, and play, SAFER by reducing the response time by law enforcement. *AlarmAlert* is faster than any commercial alarm system and we offer a variety of optional wireless sensors to monitor doors, equipment, and closed areas. We have working agreements with law enforcement agencies in many US communities and will assist you in establishing a working relationship in your city. If you already have a commercial security system, and want to speed up the notification process, we have an accessory product known as the Accelerator. For additional information, see info4u.us/Accelerator.pdf.
