

THE SCENE NO ONE WANTS TO SEE!

You already know that many churches don't have alarm systems or insurance. The ones that do have an alarm system still suffer from the alarm reporting process which results in an average on-scene time of around ten minutes. That's not good enough! That is why we have developed an incredible new product that can lower typical response times to around two minutes!

The secret is an amazing device, developed right here in Alabama, that can work in conjunction with an alarm system, or without an alarm system. It's called a *Premise Notification Accelerator* (PNA). The PNA is capable of notifying neighbors, property owners, and your fire department in less than ten seconds by radio, and/or text/email to PC's, Smart phones and Tablets.

And, this same device can be activated by wireless personal call buttons, intrusion detectors, or air conditioning tamper sensors to provide notification to neighbors, EMS and law enforcement agencies. There are no monthly charges, and it may be eligible for 95% federal grant funding! TheScene.crd 2015

We all know that faster response time saves lives, reduces property loss, and potentially reduces insurance rates. We also know that technology alone can't solve any problem. That is why we have developed the Super-City program which is based on a community partnership called *NeighborNet* coupled with volunteer workers known as *Community Responders*.

The combination of advanced technology, working agreement with first responder agencies, and community participation along with training and support infrastructure are the foundation for FEMA grant funding potential through the Fire Prevention and Safety grant which will open on March 16th.

We would like to work with you in applying for this grant which should range from sixty five to ninety five thousand dollars (\$65,000 - \$95,000) depending on the number of high risk structures that could benefit from a nearly free system (Actually, each participant would pay their share of the 5% matching share). There are NO monthly charges.

Eligible participants would normally include Apartment Buildings, Assisted Living Centers, Churches, Day Care Centers, Municipal Buildings, Retirement Homes, Utility Offices and other high risk buildings.

This program is the first stage of a more comprehensive program that may be eligible for a much larger grant amount later this year.. Ultimately, every property owner may potentially benefit with lower power cost, a free home security system, a community wide disaster network, and much more! If you are interested, we need to move quickly. Additional information is available at www.Info4u.us/SuperCity.
