

## Great ideas.....

don't come from bureaucrats or industrialists. They come from *people* just like you. Our job is to convert those ideas to useful products and technology that serves a needed purpose, efficiently, and affordably. For your consideration, we have provided information on some of those ideas and products that can help make your school safer, more efficient, and more responsive to the needs of those you serve.

Oxford, Alabama Police Chief Bill Partridge is well known for his progressive policies on community safety. Chief Partridge was instrumental in setting up a system for equipping all DeArmanville School classrooms with a personal emergency radio calling system capable of providing direct communications with school administrators and law enforcement. Learn more about this system at [info4u.us/BillKnows](http://info4u.us/BillKnows).

Micah Kemp, at Ramsey High School in Birmingham, was recently asked to find better radios at lower cost than the ones being used. Not a simple task, but he gave it to Mallore Johnson at Falcon Wireless, and you won't believe what happened! The next thing he knew, the CEO of Falcon showed up with a box full of different brand radios, and models. He invited Mr. Kemp to try them out and pick the one that best suited his needs. Would you believe the one he picked was a third the cost of what he had been using? See [info4u.us/MicahKnows](http://info4u.us/MicahKnows) for more info.

Hi, my name is Candice Staggs, and I would like to tell you more about *CareNet*. In essence, the *CareNet* concept is one of developing a mutually beneficially relationship between law enforcement and those in the community that could benefit by faster response times in times of emergency. This program is now being offered to law enforcement agencies and those in need of help in a hurry. See [info4u.us/CareNet.pdf](http://info4u.us/CareNet.pdf) for more info.

## Here are few more accomplishments.....

Albert LeBlanc is not one of your average school principals. When he sees a problem, he does what is necessary to fix it. Case in point, traffic management required to connect students to proper transportation during afternoon going home activities. He told us he wanted some kind of outside wireless intercom for curbside communications. Using a variation of available technology, we were able to deliver on time and under budget with a product now known as the *CurbSider*. If you have a similar need, you may want to check out [info4u.us/AlbertKnows](http://info4u.us/AlbertKnows).

We have served the bus communications needs for Harold Pearson of the Cherokee County Alabama Board of Education for nearly two decades. Harold has been instrumental in the development of several products, including a new device that can bridge in-school UHF radios to newer network-based school bus radios. More info is available at [info4u.us/HaroldKnows](http://info4u.us/HaroldKnows). BTW, if you would like to know more about a school bus radio system that can pay for itself, take a look at [info4u.us/PoC-Intro.pdf](http://info4u.us/PoC-Intro.pdf) for more information.

Meet Reginald Ware, the Asst. Principal at Central Park Christian School. He is the one who inspired us to develop a product known as "*The DoorMate*". Long story short, Reginald wanted a wireless access control system that could be controlled by ordinary UHF radios used in the school. Suffice to say, he got it, on time and under budget. Want to know more about this extraordinary user designed product? Visit [info4u.us/ReginaldKnows](http://info4u.us/ReginaldKnows) for more information.

A brief word about our products. The ones we build ourselves are through the efforts of Phil Rich, an Electrical Engineer and Presbyterian minister. The ones built by our Premier Partners include BlackBox, Childs Antennas, Hytera, Maxon, RCA, Ritron, N2W, NEXTEL and a few other products made in America whenever possible. You can learn more about us at [info4u.us/WeAreDifferent](http://info4u.us/WeAreDifferent).

The information provided in this two-page overview represents hundreds of hours of research, contributions by those with whom we work, engineering and development that would have costs thousands of dollars if done by consultants. For you, it's all free! There is a LOT of information contained in the links provided. This is not for casual reading. It is a complete guide to assist you in making your school and your transportation services safer and more efficient for students and staff. We hope you find this information useful and we look forward to serving you!

Burch H. Falkner, CEO and Candice Staggs, COO working together for over 25 years!
