

TeamTalker N55

Nationwide PTT Radios

The N55 Nationwide *TeamTalker* is the affordable alternative to managed Network P25 radio services.

The radio of tomorrow is here today! The N55 TeamTalker!

Low cost, long range, group talk.....

The need for public safety agencies to talk to other law enforcement, hospital and school users on a departmental, group, or individual basis is one of key perceived advantage of a wide area trunked radio system

Actually, the operational benefits of this capability may be overstated. However it is not our role to tell our customers what they should or should not do. What we strive to do is to provide alternate solutions which are better, less expensive or both. For that reason, we offer network radios that have HUNDREDS of times more capacity than ANY private radio network. Not only do these radios provide more capability, but better coverage, not only just in a single county, or even a whole state!. Oh, BTW, these radios provide 99.8% NATIONWIDE coverage.

And, for cost effectiveness, there is no comparison! Our N55 portable network radio priced at \$599 is about ONE-FOURTH the cost of a 700 MHz trunked private network radio, and network user fees are INCLUDED for the first year. Mobiles are only \$200 more! After the first year, you pay just \$24.99 per month per radio for network use. And, the new N55 radio is smaller, lighter, more powerful, less expensive to maintain, and nationwide GPS tracking is INCLUDED, along with Cloud message storage and playback of all conversations. There is nothing else like it anywhere at any price!

Here's more good news. We have a service plan that virtually ELIMINATES downtime and high maintenance costs (See info4u.us/aboutservice.pdf for more information) And, we have a flexible and affordable upgrade program unmatched in the industry. See info4u.us/foreverbetter.pdf for more info.

If you would like the whole story and how TeamTalker compares with other products and systems, see info4u.us/somethings.pdf . You'll be glad your did!

SPECIAL PRODUCTS

See info4u.us/BlueLINX-55.pdf for additional information on a terminal that can connect an existing 2-way radio system to TeamTalker radios. Cost will vary depending on the type of radio system you wish to connect. For VHF or UHF conventional radio systems, the cost is typically around \$1,500. Users of wide are trunked Astro 25, MotoTRBO or P25 radio systems can keep the cost in range by providing one of their radios for use as a host radio.

Users of the *SmartDispatch* system will need an internet connected PC, Windows XP or above. The PC will need a microphone and speakers. Most PC's have speakers, but sometimes not a microphone. We can provide a high quality desk top microphone with your choice of mini-phone or USB connectors and amplified speaker with volume control for \$89 complete and ready for operation (**Recommended**). For additional information, please give us a call or drop us an email as shown below. We're always glad to hear from you!
