**Our most affordable surveillance radio for church security!**

# The Pocket (or purse)Mate

is ideal for smaller churches, retail stores, schools and other smaller buildings. The good news is that you don't have to wonder if our incredible new *Pocket Companion* will work for you. You can try a couple on our *Try Before You Buy Program*. See [info4u.us/tbyb.pdf](http://info4u.us/tbyb.pdf) for more information.

The price is right - just \$89.95, set up on the UHF frequencies of your choice. The specs are pretty good as you will note below. There are bigger radios, there are more powerful radios, and radios with more features, but for many users, the *Pocket Companion* is just what may be the perfect choice. Better yet, his radio may be just perfect for YOU!

This little radio has the features you want including a surveillance headset for only \$124.99! With 16 channels and a scan function, you can have private talk groups as well as a master emergency channel - for in-building security use. You can even scramble audio so bad guys can't listen in with scanners.

The transmit power of 1.5 watts conserves battery life while providing all the operating range that many users will ever need. And, speaking of batteries, we can program the Pocket Radio for extended battery life and even provide a low battery warning when it is time to recharge batteries. You can even have hands free VOX operation when you add an optional audio accessory. All in all, a great little radio for not a lot of money. Try a couple - you'll see! Call us at 205.854.2611 to get yours!
