

# SiteAlert<sup>®</sup>

Emergency Wireless Notification System

## Gets help in a hurry!

Help at the push of a button!

Plant safety is Priority One with American manufacturers closely followed by reduction of downtime and increased productivity. *SiteAlert* can help you meet both of these objectives - efficiently and affordably plus providing compliance with OHSAS18001.

The heart of the system is the SiteAlert emergency call unit shown at the center left. This incredible little device can be programmed with a pre-recorded message over VHF or UHF radio channels at the touch of a button. Announcements can be broadcast to supervisory personnel when production works need to quickly report an injury, chemical spill, fire, or equipment failure. Each *SiteAlert* can be recorded with a unique message such as *Assistance required in production area 14*. The message can be sent one time, multiple times, or continuously until management arrives to reset the unit.

Optional low cost strobe lights are available to provide visual aid for those responding to the emergency call. AND, there is no requirement for AC power in remote areas. *SiteAlert* can operate either from available 110 VAC power or from internal AA batteries (6) that last for up to one year INCLUDING powering of the optional strobe lights. When batteries require replacement, the SiteAlert will send a message over the air advising need and location. Three models are available - VHF licensed, UHF licensed, or VHF-M unlicensed. Call us at 800.489.2611 for more information.

### Benefits:

- Gets help in a hurry when needed!
- Reduces response time from an average of 10 minutes to less than 2 minutes
- Simple to install by user, can easily be relocated as required
- No monthly charges or long-term contracts. Price includes custom programming and delivery.
