

# SiteSentry™

## Wireless Notification System

Protects People, Premises, and Property with no reporting delays and no monthly charges!

MADE IN THE USA!

*SiteSentry™* is an alarm notification system designed to transmit a recorded voice message directly to VHF or UHF 2-way radios with no phone lines, Internet, or monthly charges. Premise entry is possible only by persons equipped with a wireless key fob (See picture at left) or with a fixed access control button (far left) in a secure hidden area.

The standard *SiteSentry™* can also be connected to an existing security alarm system (as shown on the left) to provide faster notification to personnel in the immediate area and/or participating first responders (EMS, Fire, Police – any or all as applicable).

If you don't have a security service, the *SiteSentry™* can provide the normal functions of a fee based alarm service. The major differences being that you can install it yourself with a choice of wireless door, motion, tampering and smoke detection sensors as well as personal panic buttons. There are no monthly charges and typical response times can be significantly reduced through bypassing of alarm monitoring services & 911.

Depending on your local situation, your calls can be routed directly to local law enforcement officers, to volunteer fire department members, church elders, local business locations, or neighbors equipped with low cost (\$149) two-way radios. Routing calls to local law enforcement agencies and/or fire departments require letters of agreement. More information is available by calling us at 205.854.2611.

The cost of *SiteSentry™* is \$795 with two access control buttons. A fixed control button adds \$150. Personal emergency call buttons are \$49 each. Door sensors are \$79 each.. Motion sensors, Tamper detectors (for air conditioners) are \$149 each as are smoke detectors. Additional information on the reverse side.

# How it all works.....

There are two versions of *SiteSentry™*, the standard model, shown on the reverse side is ideal for churches, fire stations, municipal buildings, residences, and small business where alert calls can be sent to radios used by local law enforcement, volunteer fire department personnel, or neighbors. This provides the fastest response possible. The wireless sensors and personal call buttons have a range of up to 100 feet to the *SiteSentry™* controller. The internal VHF or UHF radio used with this system has a range about equal to the typical public safety or commercial portable radio.

*SiteSentry II™* is available with your choice of a more powerful VHF or UHF transmitter with more than twice the power of the standard *SiteSentry™* as well as longer range sensors or personal call buttons with up to 500 foot range. This provides the ability to serve a much larger group of users (such as school classrooms). The price of \$995 includes two wireless access control buttons and automatic call notification in the event of AC power failure (A standard feature in both models).

*SiteSentry II™* is optionally available with the ability to send email/text messages to cell phones and PC's. The price (\$1,095) is the same as the VHF or UHF radio models or it can be ordered with the ability to send both VHF or UHF radio AND email/text messages for \$1,295. The email/text model requires an internet connection, generally though an existing broadband router. The ability to send messages to PC's, cell phones, smart phones and tablets provides the ability to address specialized applications which will be addressed shortly.

Personal emergency call buttons and Door sensors at \$99. Tamper detectors (for air conditioners are \$179 each as are smoke detectors. Now, let's take a look at some potential applications for *SiteSentry™* and *SiteSentry II™*.

**Volunteer Fire Department** – Standard *SiteSentry™* VHF radio option to broadcast messages directly to fire department pagers and/or radios with two access control buttons, 2 door sensors, 1 motion sensor, and 1 smoke detector would have a package price of only \$1,251 with no monthly charges.

**Business, Church, or Home** – *SiteSentry II™* with email/text message notification (requires connection to broadband router), 2 door sensors, 1 motion sensor, 1 AC tamper monitor, and 1 smoke sensor would have a package price of \$1,651 with no monthly charges and immediate notification to others in the area and optionally, directly to law enforcement and/or fire and rescue.

With either system response times are MUCH faster than notification through an alarm monitoring service! Call us for additional information or a demonstration!
