For use when dealing with disruptive people!

Anyone in an administrative position may have to deal with disruptive people. They come in all ages, shapes, backgrounds, races, and genders. As a school administrator, coach, or counselor; there are times when recorded event evidence can reduce or eliminate frivolous litigation, threats, slander, loss of employment, or worse!

A personal camera system in your office provides evidence, if and when needed, relating to events with disruptive people. Unlike conventional "security cameras", no installation is required and there is no requirement for special equipment for storage, retrieval, and distribution of recorded data. If you have an event, you simply turn the camera off and retrieve the data in one of three ways.

People you don't want in your office!

(1) Use the included software, loaded to an existing PC to transfer camera data via a supplied USB cable. Moderate computer skills and knowledge of operating systems is required. (2) Purchase a dedicated NetBook PC with pre-loaded software, ready to use with simple user instructions, or (3) Do nothing until you have recorded data that needs to be stored on a USB thumb drive for viewing, retention, and distribution. There is a minimal charge of \$90 per year for this service. Additional information available on request.

Quick Pricing Guide
