VoiceTXTR-SC™

The *Heart* of the Safe-City Program

Alerts others by 2-way radio and cell phones in 10 seconds or less!

VOICE TO TEXT

People in Peril.......

need help in a hurry! That's why we developed a complete family of products to get help quickly for people who may be targets for assault, robbery, or both. For those that may have security or emergency response teams on the premises (churches, hospitals, schools, etc.), we offer a product known as the *HelpAlert-II* to quickly alert others on or near the premises. Additional information is available at info4u.us/HelpAlert-II.pdf.

Another product, known as The *Accelerator* is available as a supplement to speed up the notification process associated with commercial alarm systems. Instead of a multi-minute alerting and confirmation process, The *Accelerator* can send messages directly over law enforcement radio networks in less than 10 seconds! Additional information is available at info4u.us/Accelerator.pdf.

The key to the success of both the *HelpAlert* and the *Accelerator* is based on technology that provides help in a hurry when needed. *HelpAlert* is activated by a personal call button (both desk and body worn models are available). The *Accelerator* is activated by whatever sensor input is associated with a commercial alarm system. Both devices transmit the emergency call request by VHF or UHF wireless radio used on the premises, by local law enforcement or both.

The *VoiceTXTR-SC* provides two additional functions. The first is to covert the distress calls transmitted by VHF or UHF radio and convert those message to text messages that can automatically be sent to cell phones associated with the security of premises. This may involve supervisory law enforcement officials, management, or others involved with the safety of the premises. Optionally, the *VoiceTXTR-SC* can extend the call for assistance out to users of 700/800 MHz regional trunked radio systems.

An Introduction to The *VoiceTXTR-SC*™

To say that the *VoiceTXTR-SC*™ has evolved would be just a bit of an understatement. To help you better understand what this remarkable product can do you, we have prepared a brief overview of what the *VoiceTXTR-SC* can do for YOU!

VoiceTXTR was originally designed for single location use (Churches, Courtrooms, Industrial Plants, Municipal Offices, & Schools). Over time, a need for community wide service evolved. Our new *VoiceTXTR-SC* models are designed for wide area coverage by sharing the use of a single wide area device that can serve whole town, city, or even an entire county!

The cost of the basic *VoiceTXTR-SC* is $3,898 including programming of cell phone call groups, installation and training. There are no monthly charges or long term contracts. The *VoiceTXTR-SC* connects directly to any IP network with no special skills required. Changes in call lists can be done by the owner, or a contract or a per-event basis by the equipment provider at nominal cost.

There are no technical limits on the number of phone numbers that can be programmed into the *VoiceTXTR-SC* as long as there are no more than 25 users in an individual call group (free with Google as a primary and Yahoo as a backup). Larger call groups are possible using commercial services such as Constant Contact (See constantcontact.com for additional information).

If you have a VHF or UHF commercial 2-way radio system, such as those used in churches schools and commercial enterprise; and your local law enforcement agency also operates on VHF or UHF, and there is an agreement to allow approved users to send emergency messages; your only cost (as a user) would be the cost of your emergency call buttons (See info4u.us/HelpAlert-II.pdf for additional information).

If you are a County or Municipal administrator, or a Community minded corporate sponsor of charitable causes; you might consider payment for the *VoiceTXTR-SC* system ($3,898). See info4u.us/help4all.pdf for more information. .If you are a Church or School administrator, involved in Bank or Credit Union management, a Chamber of Commerce or Civic organization leader, you might consider purchasing the *VoiceTXTR-SC* for your community.

In some areas, law enforcement agencies use a high tech radio system generically known as digital trunking which generally operates in the 700/800 MHz band. We offer an upgrade for the *VoiceTXTR-SC* to provide compatibility with VHF or UHF *HelpAlert* devices. This adds $2,000 to the cost of a standard *VoiceTXTR-SC*. Give us a call at 205.854.2611 for additional information. Thanks, we look forward to serving you!
