

VoiceTXTR™

Get the call wherever you are!

Get the message every time, even in poor radio reception areas on your PC and your cell phone!!

There are no contracts or monthly charges with VoiceTXTR!

VOICE AND TEXT

When your mission is critical

You need to get the message every time! Narrow banding reduced the range of VHF and UHF radios. We all know that. We also know the commonly proposed solutions like increasing power, adding another repeater or two, adding an app to cell phones and/or subscribing to one of those services that pushes email messages to cell phones, such as Action 911 or eDispatches..

Every one of these solutions either costs too much, is unreliable, or simply isn't practical. We decided it was time for a new, affordable solution based on the integration of voice dispatch messages and smart phone digital messaging. Unlike others who have supplemented voice dispatch messages with an email sent by Dispatch, *VoiceTXTR™* is stable, doesn't reduce cell phone battery operating life, is not dependant on a third party integrator, doesn't cost much, and there are no monthly charges!

VoiceTXTR is simple. Just plug it in to an AC outlet, connect it to the Internet, and you are in business! *VoiceTXTR* monitors your Dispatch calls and is activated by a single button to send the message to all members of your group (Up to 25 members per group). The price is right, just \$1,849 including setup and training plus service and support for one year. Additional information for post sale services is available on the reverse side.

The pictures at the upper left show how the *VoiceTXTR* works. The dispatcher "tones out" the designated police department, rescue squad, or administrative group. The call is received by the *VoiceTXTR* which then forwards the call to any cell phone capable of receiving a text message.

The user receives a text message indicating the need to check with department administration by phone or 2-way radio for additional instructions. If the user has a smart phone with the ability to receive email, the message will be sent with a voice file attachment. This can be played as a recorded voice message (just as it would be heard on a 2-way radio). Call us for more information or a demonstration!

Call anytime – 800.489.2611 or Email ServingU@The-Communicators.net

The *VoiceTXTR*.....

can be installed at the dispatch center to serve multiple departments or user groups. The programming for the first user group of up to 25 cell phone numbers is included in the base price. Additional user groups of up to 25 users can be added if all users are on the same radio operating frequency. The cost for adding additional groups is a one time charge of \$75 per group. No limit to groups operating on common frequency.

The *VoiceTXTR* is covered by a one year factory warranty and free phone support. Users can be added, deleted, or changed by simply calling our tech support line (205.856.2610). We will make the necessary changes at no charge. After the first year, we offer a choice of on-demand service at a flat rate of \$75 or a \$120 annual unlimited plan which allows direct web portal access. This allows you to add, delete, or change users as desired. For more information, drop me an email to Phil@The-Communicators.net or give me a call at 205.854.2611. In the meantime, check out some of our other products that may be of interest as listed below! Phil Rich, CTO

Wouldn't you like to KNOW that your messages are going through your repeaters? *InstaLertR*™ checks every outgoing message and verifies the link to the repeater and transmission of the message by the repeater. This keeps the folks at ISO happy as well as those you serve. The price is reasonable, just \$1,549 for use with any VHF or UHF repeater, analog or digital! Call for more information!

Commercial alarm systems with centralized monitoring and 911 reporting are great UNLESS the bad guys know that the average response time is 10 minutes or more when they can generally be in and out in 4 minutes or less! That's why you need to add the *Accelerator* to your alarm system as a part of an enhanced alarm response system working in association with participating law enforcement agencies. With *Accelerator*, response times can typically be reduced to 2 minutes or less! Call us for more info!

Many of our law enforcement users have requested a simple and affordable means of connecting low cost VHF or UHF jail and school radios to wide area P25 digital trunked radio networks. Putting a two thousand dollar radio on a court judge, jailer, SRO, municipal or utility office can get expensive, in particular if monthly user fees are applicable. Our new *BlueBox-DMA* system provides a great solution. For more information, check out how you can do more for less at info4u.us/BlueBox-DMA.pdf
