Note 1: Our first three products at the above left are traditional “plant radios” comparable to the Motorola CP200d or XPR3000e. Our products are well known names – Hytera – second largest 2-way radio manufacturer in the world, and NEXTEL. The PD412i is in a class by itself with a built in RFI reader and companion associated sensor/transmitters. This is an ideal security radio and/or for people engaged in hazardous occupations. See info4u.us/PatrolLINX.pdf for more information.

Note 2: Hands Free radios are ideal for crane communications, materials handlers, and other workers that would benefit from this capability. For example, a crane operator would normally use a mobile with a speaker microphone mounted close to the operation seat position. The portable can be use by the floor spotter, also equipped with a collar mounted speaker microphone or other optional audio accessories. See info4u.us/betterhearing.pdf for additional information.

Note 3: We offer both airtime free and fee-based infrastructure. Airtime free means the user pays for FCC licensing, infrastructure cost (antenna systems, repeaters and associated costs). The i500 and m370 use a shared fee-based infrastructure with first years cost included in the equipment price. After the first year, there is a network user fee of \$9.90 monthly, or \$99 annually for use with an associated Wi-Fi network for the i500 portable. The m370 mobile is slightly more expensive at \$14.99 monthly or \$149 annually for NATIONWIDE COVERAGE! This rate plan is optionally available for the i500 portable. See info4u.us/TeamTalkers for additional information. Pricing on our industrial safety and code compliance products follows on the next page.

SPECIAL PURPOSE PRODUCTS FOR 2019

SiteAlert can help keep your employees safe, your facility OHSAS 18001 Code Compliant, and your stockholders happy with improved profitability. Works with most UHF or VHF analog radio systems, including license free MURS. People in peril can get help in a hurry at the touch of a button! More info available at info4u.us/SiteAlert.pdf.

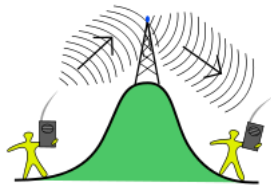

VoiceCaster can help avoid OSHA safety violations such as 29 CFR 1910.165(b) while also helping to make your facilities safer and more efficient for you and your employees. *VoiceCaster* is a wireless PA system that can be connected to an existing wired system or as a standalone wireless system. Additional information is available on the web at info4u.us/VoiceCaster.pdf.

Hearing Protection is required in areas where noise exceeds 90 dB as per NFPA standards. We can handle that. We can also provide situational awareness. Check out info4u.us/AskMallorei for some interesting information on how you can protect the hearing of your employees and improve productivity at the same time! See info4u.us/betterhearing.pdf for more information!

VoiceTXTR can provide the capability to immediately notify participating public safety agencies by 2-way radios, fire pagers, fixed monitor receivers, or cellular phones. Public notification is also possible through the *CareNet* program. See info4u.us/VoiceTXTR-SC.pdf and info4u.us/CareNet.pdf for additional information.

Repeaters can extend range for UHF or VHF portable radios or mobile radios, linked together by IP, or serve multiple users on a single channel with Hytera's exclusive *Pseudo Trunk* feature. It's like getting two repeaters for the price of just one! We even have a belt worn repeater! See info4u.us/Hytera-Repeaters.pdf

TouchCall 2-way call boxes are ideal for both temporary or long-term use. A few "D" cells will keep you running for up to one year before replacing. Four models are available – the standard VHF or UHF wireless intercom, a heavy-duty model, and as a gate or door controller. More info is available at info4u.us/TouchCall.pdf.

RadioBridge provides the ability for different types of radios to talk to each other, like allowing low cost analog VHF radios to talk to pricey digital P25 radios. A good example of how this technology works is info4u.us/DavidKnows or linking P25 trunked radios to inexpensive UHF school radios. See info4u.us/HaroldKnows.

Z-Call is a low-cost desktop analog radio that is available for VHF, UHF, or the license free MURS radio service. See info4u.us/Z-Call.pdf for more information. If MURS is a new term to you, check out mursradios.com for more information or just give a call at 205.854.2611.
